

Question #1: Display the property name, price, and host name for listings priced under \$150.

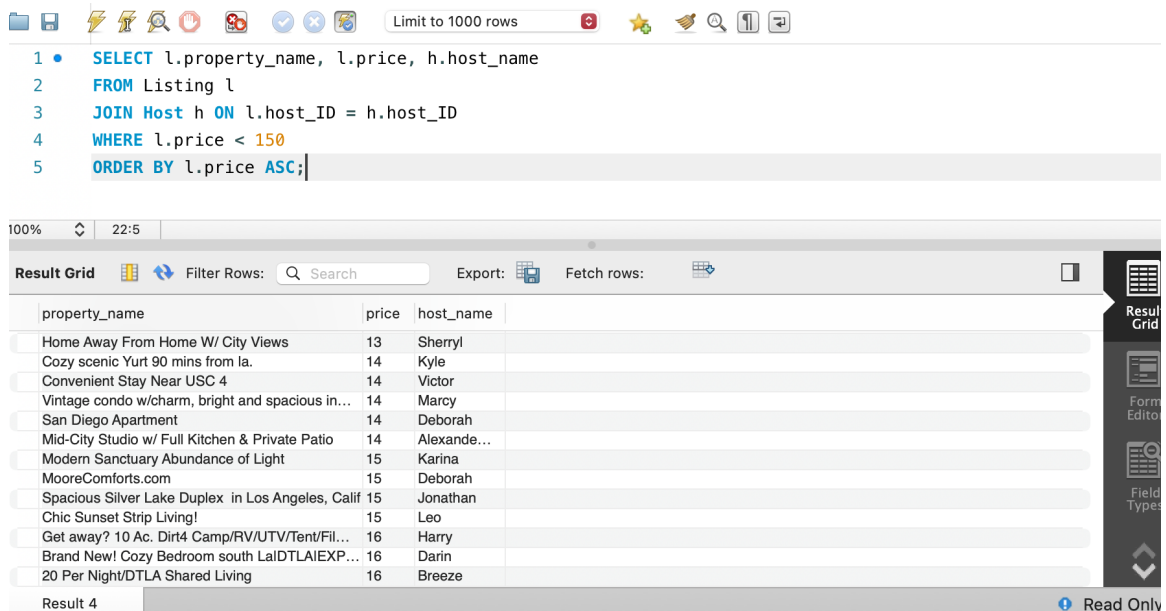

```
1 • SELECT l.property_name, l.price, h.host_name
2 FROM Listing l
3 JOIN Host h ON l.host_ID = h.host_ID
4 WHERE l.price < 150
5 ORDER BY l.price ASC;
```

Result 4 Read Only

This query finds listings under \$150 across the three cities, which is a realistic budget search a traveler might do. Joining to the Host table also shows which hosts are offering these lower priced listings. Some of the lowest prices, as low as \$4 a night, are not realistic for a real listing. One host named Rocky has over a dozen listings all priced at \$4, with almost the same title repeated. This reinforced the need for data cleaning before deeper price analysis.

Question #2: For each city, how many listings have a license number on file versus none?

```

2      CASE WHEN l.license IS NULL OR l.license = '' THEN 'No License' ELSE 'Has License' END AS license_sta
3      COUNT(*) AS num_listings
4  FROM Listing l
5  JOIN Neighbourhood n ON l.neighbourhood_id = n.neighbourhood_id
6  JOIN City c ON n.city_ID = c.city_ID
7  GROUP BY c.city_name, license_status
8  ORDER BY c.city_name, license_status;

```

100% 38:8

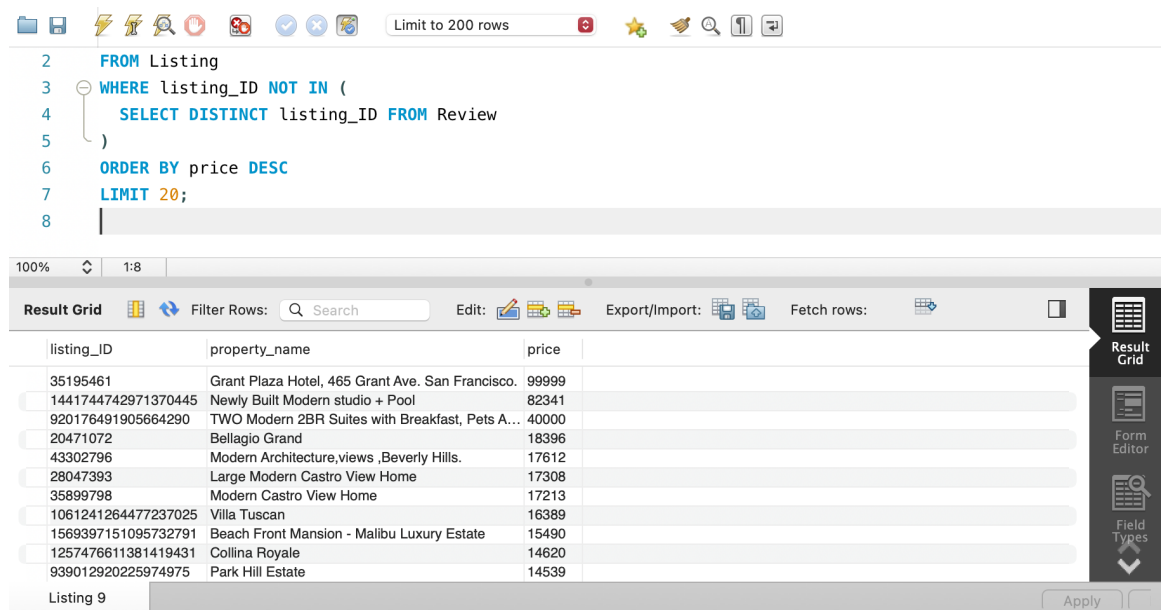

Result Grid Filter Rows: Search Export:

city_name	license_stat...	num_listings
Los Angeles	Has License	13192
Los Angeles	No License	30740
San Diego	Has License	10239
San Diego	No License	3034
San Francisco	Has License	4860
San Francisco	No License	2562

Result Grid Form Editor Field Types

LA, San Diego, and San Francisco all require hosts to register for a license number. This query breaks down how many listings have a license and how many don't, city by city. A city with a lot of listings missing a license number could mean weaker enforcement or lower compliance from hosts. This kind of information is useful for real short term rental policy research.

Question #3: Which listings have never received a single review?

```

2  FROM Listing
3  WHERE listing_ID NOT IN (
4      SELECT DISTINCT listing_ID FROM Review
5  )
6  ORDER BY price DESC
7  LIMIT 20;
8

```

1257476611381419431	Collina Royale	14620
939012920225974975	Park Hill Estate	14539

Listing 9 Apply

A listing with zero reviews could be a new listing, an inactive one, or just not proven yet. This matters to a traveler choosing where to book, and it matters for trust and safety on the platform.

The subquery collects every listing_ID that has at least one review. The outer query then excludes those IDs, so only listings with no reviews at all are left.

Question #4: Which listings are priced at either extreme — under \$20 or over \$1000 per night?

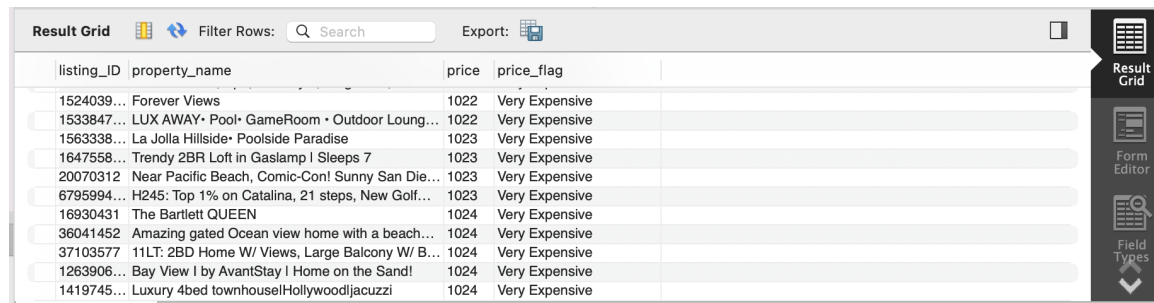

The screenshot shows a SQL query editor with the following query:

```
2 FROM Listing
3 WHERE price < 20
4 UNION
5 SELECT listing_ID, property_name, price, 'Very Expensive' AS price_flag
6 FROM Listing
7 WHERE price > 1000
8 ORDER BY price;
```

Below the query editor is a result grid showing the results of the query. The grid has columns: listing_ID, property_name, price, and price_flag. The results are sorted by price, showing listings that are either very cheap (under \$20) or very expensive (over \$1000).

listing_ID	property_name	price	price_flag
1645724	Private bed/bath: 5 min to metro	4	Very Cheap
5108359	"洛杉矶"千里之行(旅行购物治游)始于"足下"《落...	4	Very Cheap
35655138	#F43: Private room in Lower Haight @hacknsleep	4	Very Cheap
35685982	#F15 Full private room in NobHill @ hacknsleep	4	Very Cheap
35917031	#T15 Twin private room in NobHill @ hacknsleep	4	Very Cheap
36476134	#F43: Private room in Lower Haight @hacknsleep	4	Very Cheap
36910851	#T15 Twin Size private room Nob Hill @hackns...	4	Very Cheap
37972578	#F43 Private room. Brand-new furniture.	4	Very Cheap
37972611	#L15. Loft (twin) private room in Nob Hill area	4	Very Cheap
39053001	#aF43 Private room for 1-2 ppl hacknsleep.com	4	Very Cheap
39053254	#aF43 Private room for 1-2 ppl hacknsleep.com	4	Very Cheap

The screenshot shows a SQL query editor and a result grid. The query is the same as in the previous screenshot. The result grid shows the results of the query, sorted by price. The grid has columns: listing_ID, property_name, price, and price_flag. The results are sorted by price, showing listings that are either very cheap (under \$20) or very expensive (over \$1000).

listing_ID	property_name	price	price_flag
1524039...	Forever Views	1022	Very Expensive
1533847...	LUX AWAY• Pool• GameRoom • Outdoor Loung...	1022	Very Expensive
1563338...	La Jolla Hillside• Poolside Paradise	1023	Very Expensive
1647558...	Trendy 2BR Loft in Gaslamp I Sleeps 7	1023	Very Expensive
20070312	Near Pacific Beach, Comic-Con! Sunny San Die...	1023	Very Expensive
6795994...	H245: Top 1% on Catalina, 21 steps, New Golf...	1023	Very Expensive
16930431	The Bartlett QUEEN	1024	Very Expensive
36041452	Amazing gated Ocean view home with a beach...	1024	Very Expensive
37103577	11LT: 2BD Home W/ Views, Large Balcony W/ B...	1024	Very Expensive
1263906...	Bay View I by AvantStay I Home on the Sand!	1024	Very Expensive
1419745...	Luxury 4bed townhouseHollywoodJacuzzi	1024	Very Expensive

This query puts both price extremes into one result using UNION. Listings under \$20 are most likely data errors or placeholder prices. Listings over \$1000 are more likely to be real high end listings. Each row is labeled either Very Cheap or Very Expensive, so it is easy to tell which group a listing belongs to. This is useful for reviewing the data or doing further analysis.
